

FUKKOL

CORROSIVE INHIBITION *Anti Rust Series*

Rustking S

100138

Fukkol RUSTKING S containing oxidation and corrosion inhibitors and diluted with a petroleum solvent for ease of application. Designed for the temporary rust protection of steel in covered, storage or packaged shipment. Temporary protection of sheet steel, hand tools, small parts, bearings and highly machined surfaces under relatively mild conditions of indoor storage, packaged shipment or interprocess handling. May be applied by brush, dip or spray. Where a higher level of oily film rust protection is required.

Rustking L

100140

Fukkol RUSTKING L type is a light grease-like coating that has a brown colour that visibly shows where the product has been applied. RUSTKING L type displaces moisture and provides corrosion protection for 50°C~60°C not flux more than five years of indoor storage and three years of outdoor.

Rustking Y

100137

Fukkol RUSTKING Y is a general purpose medium term inhibited protective oil. Can be applied by complete immersion, brushing or spraying. Removal of the protective film is not normally necessary, but if required a petroleum solvent, alkaline cleaner or vapour degreaser can be used.

Rustking W

100139

Fukkol RUSTKING W is a new technology, high performance, environmental friendly water-based corrosion preventive formulated on a synergistic blend of corrosion inhibitors. RUSTKING W deposits an almost imperceptible light, soft greasy film with excellent drying properties. RUSTKING W does not contain barium.

Rustking S5

100145

Fukkol RUSTKING S5 is the latest technology rust preventives, possess dewatering-water displacing ability; secondary amine and heavy metals free enables safer disposal of separated water layer; also high covering capacity due to the exceptional level of rust protection from a thin film. These products are cost effective due to high quality, loss reduction and increased covering capacity. It can be applied by dipping, spraying, brushing or flooding.

Rustking V

100141

Fukkol RUSTKING V is a volatile rust preventive fluid, which has good properties of rapid water displacement and deposits an oily protective film after evaporation of the solvent. Dry metallic parts particularly after pickling and washing processes. Also ideal for protecting components that have been machined with soluble oil emulsions of water based alkaline solutions. Especially suitable for short term inter-operational protection during processes.

RUSTER P3

100143

Fukkol Ruster P3 Insulation Protective Paint is a multipurpose anti-rust paint, that is suitable for steel and sliding spare parts including rotor, bearing, fastening pieces and devices, for general anti-corrosion protection.

Benefit-

- Excellent anti-corrosion protection indoors
- Provide an effective protective film
- No need pre-treatment on parts' surface
- With good effect in wet environment

Effectively prevented RUST CORROSIVE

500ml

NX Colorless Corrosion Inhibitor 99281 *Colorless, Outdoor 1-2years*

Semi-Dried, no stripping even scratched by hand. Super-Strong rust preventing property in adverse conditions cause by outdoor moisture, salty and chemical or corrosive environment. Suitable used as long-term indoor and outdoor rust preventing agents. Can be used lubricants and corrosive inhibition agents for the hinges of bonnet and boot.

500ml

Dry Film VCI Anti Rust Spray 100036 *Volatile Corrosion Inhibition*

Dry Film VCI Anti Rust Spray is a volatile corrosion in the preservation of ferrous metal parts properties of preservative oil with volatile corrosion inhibitors to provide long terms protection against rust in "close" systems or voids corrosion and don't flow to pollute parts during processing. No contains of nitrate or nitrite, no side effect on plastics, in enclosed systems. It combines the protective.

500ml

Rustking "S" 12231 *Short Terms Rust Prevention*

Fukkol Rustking S is made from high melting point paraffin wax and specific penetratable and water-displacable rust-resistant additive. Mainly used for protection of steel material.

500ml

Peelable Protective Film Coating 84668 *Not Reiduce, Scratch Protection*

Fukkol Peelable Protective Film Coating is a rust and stain protection product that can be "peel off when necessary". It is suitable for metal mold plating surface of mechanical product or polished surface with anti-rust, scratch and stain proof effects. When the spray dried, it will form a yellow or translucent film that has strong toughness and easy to peel off ability when don't need it. When peel off, the item under it will good as new. The formulations containing gasification rust inhibitor, this can be released anti rust ingredient to fill in packing voids and provides excellent anti-corrosion effect.

500ml

Ruster Wax 56686 *White Medium Term Protective Film*

FUKKOL Rust Wax is a medium duty rust preventative, formulated to provide corrosion protection to components such as gears, steel bar, tubes and heavy components and other exposed surfaces stored either indoors or outdoors. This product contains a fugitive white dye for identification purposes.

500ml

5in1 Freeze Dismantle Spray 88679 *Dismantling the Jammed Screws*

FUKKOL Freeze & Dismantle 5 in 1 is a product with 5 characteristics together in one. The super quality turns out to be the most effective in the similar products. It features with Freeze, Penetrate, Lubricate, Remove rust and Anti-rust. It is a multipurpose dismantle screws aerosol professional in handle the rust corrosion problems in screws, nuts, rivets, metal fastenings. It can be applied in many areas such as Mould agriculture, chemical industry, communication, auto industry, aerospace, metallurgy and military industry.

500ml

Food Grade Anti-Rust Spray 11994 *NSF H1 Approval*

Get powerful, food-safe lubrication and protection with FUKKOL Food Grade Anti-Rust Spray. This 100%-pure white grease meets the needs of heavy-duty equipment and machine parts; and is safe to use around edible products. NSF-approved; safe for settings that include incidental food contact. Designed for heavy-duty application protects equipment from rust and wear. Effective as a lubricant, release agent, protective coating or anti-rust film. Ideal for gears, rollers, cables, gaskets/seals, etc. in food-processing facilities.

450ml

GILL 6 Clear Protective Lacquer 31131 *Protective Film for Electronic Components*

Fukkol Gill 6 is an ideal protective paint for electronic components. It can prevent leakage of electricity and short circuit by forming an insulate and protective film to resist corrosion caused by dilute acid, lye and moisture. Having extreme stability, it is effective at temperature from -70°C to 90°C.

500ml

Mould Protector "Green" 11334 *Green Colored Ultra-Thin Soft Film*

FUKKOL Mould Protector is a light grease-like coating that has a green color that visibly shows where the product has been applied. Mould Protector displaces moisture and provides corrosion protection for more than two years of indoor storage. The product may be removed with a mild solvent rinse or wipe or simply by putting a mould back in service and running a few parts.

500ml

Rusking "L" 48892 *5 Years Indoor, Long Lasting*

FUKKOL Rustking L type rust-proof agent makes a brown protective film shows where the product has been applied. Rustking L type provides long term lubrication and protection against rust. The rust-proof film will not melt at 50°C ~60°C. The rust-proof duration will be more than five years indoor and three year in outdoor. The product can be removed by a mild solvent or simply putting a mould back in service and running a few parts.
