## HIGH TEMPERATURE WIRE ROPE & CHAIN OIL

### Purpose :

High temperature steel cable & chain oil is designed for high performance lubricating oil, which is convenient for conveying equipment with roller and chain. The lubrication of the chain can effectively brake the machine operation and is especially suitable for the automatic lubrication system. Excellent extreme pressure additives can penetrate into the cable core thoroughly and lubricate, and provide a high load capacity to transport, reduce wear and tear,

and extend the life of the cable or chain.

High temperature and high temperature steel cable chain oil contains graphite particles and no graphite containing various types. In order to achieve high temperature, resistance to strong impact, and the various folding parts, with superior lubrication effect, and choose to match the most appropriate base oil, graphite powder and additives.

### Purpose :

High chain steel chain oil is designed for automatic lubrication system and can be used in accordance with lubricant product specification.

Apply the brush directly to the chain or oil the oil device.

Products Code	Packings	Capacity
I100245-4L	Can	4L
I100245-18L	Pail	18L
I100245-200L	Durm	200L

### Performance characteristics :

- Good resistance to high load
- Good anticorrosion
- It is not easy to drain when it is used
- Long term and effective lubrication in the range of high temperature

### Typical data

Appearance :	Brown / Black
Pour Point, ° C	-24
VISCOSITY, , 40° C	198~242
VISCOSITY INDEX	Not less than 100
Temperature range :	-15°C to+250°C

### Matters needing attention:

1. Pay attention to sealing and preserving oil products
