## RUSTKING L TYPE

### Description:

High and super long rust inhibitor is a kind of dura coffee rust inhibitor. It has a protective coating of coffee pigment to facilitate the identification of the surface. Super long term antirust agent can provide lubrication and super long period of rust protection protection. When the temperature is not more than 50 ~60 C, antirust film will not melt. It can play a period of not less than 5 years in the room. It can play an antirust period of not less than 3 years outside. It can be removed automatically in the process of injection molding and no cleaning before production.

### **Purpose :**

Provide a layer of super coffee rust resistant hard mold, absolute drainage anti corrosion and moisture-proof, in wet environment also get a safe protection for metal to provide ultra long period antirust function. It is especially suitable for heavy machinery, plastic moulds and metal products, and is also suitable for power plants and ocean going ships.

### Performance characteristics:

- Coffee color pigment, which is convenient to identify the coating surface
- There is no need to clean before injection process.
- The protective film prevents the hands and fingers from touching the surface of a metal so as to achieve complete protection.
- Protection period for more than five years (indoor)
- Protection period for more than three years (outdoor)

Products Code	Packings	Capacity
I100140-4L	Can	4L
I100140-18L	Pail	18L
I100140-200L	Durm	200L

### **Typical physical properties**

Boiling point	>100℃
Proportion	0.65
Steam density	Is heavier than air
Evaporation rate	>1 (Butyl Acetate=1)
Stability	Stable

Matters needing attention:

- 1, This product contains volatile components, pay attention to seal preservation of oil products.
2. This product is extremely flammable, not in contact with open fire
