TECHNICAL DATA SHEET

RUSTER P3

Brief introduction

FUKKOL RUSTER P3 is a multi-purpose antirust paint, suitable for rotor, bearings, fasteners and other parts and facilities, including steel workpiece, sliding parts, other exposed surfaces stored in the indoor equipment, for general corrosion protection.

Purpose

Special antirust agents are ideal for rust protection of exposed metal surfaces such as rotors, bearings, fasteners and other facilities. The special anti rust paint will form a protective film on the surface of the parts to isolate the parts from the air so as to effectively protect the parts.

Advantage

- Excellent indoor seal corrosion protection.
- Producing a layer of effective protective film.
- Generally, no surface pretreatment is required.
- Good protection in a wet environment.

Usage method

Direct and uniform can be applied to the parts.

Characteristic

Product	Special effect transparent antirust paint
Appearance	liquid
Density 25°C, g/cm ³	0.81
Copper corrosion 100°C 3h	1a
Antirust time	2 years (indoors)
Water solubility	Slightly soluble in water

Matters needing attention

1. pressure vessels, avoid direct sunlight, stored at below 50 degrees Celsius.
2. should not be sprayed to the flame. Do not stamp or burn the container.
