**FUKKOL****Nourishment for**  
**Your Machines****TECHNICAL DATA SHEET****ANTI-RUST SERIES  
FUKKOL MOULD PROTECTOR (GREEN)****Description:**

The high and long term rust inhibitor is an ultra-thin green rust inhibitor, such as a protective film with green pigments, which is convenient for identifying the surface. Long term rust inhibitor can provide lubrication and long-term rust protection. It can be automatically removed in the injection process, and there is no need to clean it before production.

**Application:**

Provide a layer of ultra thin green antirust soft film, absolute drainage and moistureproof, provide long-term antirust protection for metal. It is especially suitable for plastic mould and die casting mould in production and storage. It also applies to other metal tools and parts.

Products Code	Packings	Capacity
I11334-500ML	Can.	500ML
I11334-18L	Pail.	18L
I11334-200L	Dum	200L

**Performance characteristics :**

- It is easy to identify the coating surface with green pigment
- No need to clean before injection process.
- The protective film prevents the hands and fingers from touching the surface of a metal so as to achieve complete protection.
- The protection period is more than two years (indoor)
- No CFC 's, environmental protection formula

**Typical Physical Properties:**

APPEARANCE	SMELL	FLASH POINT °C	BOILING POINT °C	Antirust period	DENSITY 25 °C , g/cm <sup>3</sup>
Green Liquid	Solvent taste	<0	>100	2-3year	0.6-0.65
