TECHNICAL DATA SHEET

ANTI-RUST SERIES FUKKOL RUSTKING L

Description :

The high and super long period rust inhibitor is a kind of dura coffee rust inhibitor, such as a protective film with coffee pigment, which is convenient for identifying and identifying the applied surface. Super long-term antirust agent can provide lubrication and long-term protection, not more than 50 C ~60 C antirust film will not melt, in the room can play not less than 5 years of antirust period, in the outdoor can play not less than 3 years of rust, in the process of automatic injection process without cleaning before the automatic removal of production.

Products Code	Packings	Capacity
I48892-500ML	Can.	500ML
I48892-18L	Pail	18L
I48892-200L	Dum.	200L

Application :

Provide a layer of coffee color antirust membrane, absolute drainage corrosion prevention and moisture-proof, in wet environment also get a safe protection for metal to provide ultra long rust protection function. It is especially suitable for heavy machinery, plastic moulds and metal products, and is also suitable for power plants and ocean going ships.

Performance Characteristics :

- Identification of the coating surface with coffee pigment
- It is automatically cleaned in the injection process without cleaning before production.
- The protective film prevents hand sweat and finger prints from touching the metal surface to achieve complete protection.
- Protective film for more than 5 years (indoor)
- Protective film for more than 3 years (outdoor)

Typical Physical Properties :

APPEARANCE	ODOR	VOLATILE %	COPPER CORROSION 100 °C, 3 hrs	ANTIRUST PERIOD yrs	DENSITY 25 °C , g/cm ³
Brown Liquid	Solvent odor	95.5~97.5	1a	3~5	0.648~0.7
