EXTERNAL WALL POWER CLEANER

Brief introduction:

The high strength external wall cleaning agent is an acidic liquid, which is composed of a variety of organic acids, inorganic acids and surfactant. Super penetration to remove dirt, oxide and other special scale. It can be used for external wall tiles, marble, square tiles, tiles, aluminum and other hard surfaces, effectively eliminating all kinds of stubborn stains and rust stains. The clearance between ceramic tiles and tiles can be easily solved by the super decontamination penetration force, so as to achieve the effect of decontamination and whitening. No adverse effects on the surface of the articles, no residue marks, and washing as new.

Purpose:

1. Is suitable for external wall tiles, marble, tiles, tiles, aluminum and other hard surface scale cleaning.

Advantage:

– Scaling fast

Usage method:

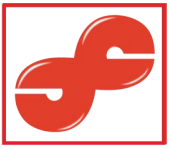

The medicine is put into the spray container, then spray the product to the dirt area, and wait for 1 minutes to finish the reaction, then wash it with clean water. For example, if the exterior wall is cleaned or the stain is serious, the dosage can be added more appropriately, and then use the brush or the floor cleaner.

Typical physical properties:

Exfernal wan power cleaner	Relative density g/cm ³	PH VALUE	Appearance
——	1.10	3-4	Colorless Transparent Liquid

Matters needing attention :

1. Acidic products should be worn with labor protection products, and the body should not contact directly with the
