TECHNICAL DATA SHEET

Tower maintain B

Description:

The common defects of the water tower are the rusting of the circulation system, the microorganism and bacteria in the water, the accumulation of a mass, the blockage of the throat and the channel, so that the circulatory system is abnormal and heat dissipated enough. Causing the water temperature to rise and lose the cooling function, heavy maintenance is needed. The high water tower maintenance agent has special antibacterial components and rust inhibitor, which can effectively solve the problem of bacterial breeding and system corrosion.

Purpose:

It is used for maintenance of water tower.

Products Code	Packings	Capacity
I100323-4L	Can	4L
I100323-18L	Pail	18L
I100323-200L	Durm	200L

Performance characteristics:

- special antibacterial ingredients to reduce the problem of bacterial breeding.
- Special antirust property

Typical physical properties:

Tower maintain B	Relative density g/cm ³	PH VALUE	Appearance
—	1.05	≥9	Blue transparent liquid

Matters needing attention :

1. The human body is not in direct contact with the product.
2. Sealed storage.
